- Collaborated with senior engineer to redesign system user interface.
- Reduced website load time by 50% for better user experience.

Full stack developer
Freelance

💼 June 2020 - Present   📍 Remote

- Develops high-quality websites and web applications using HTML, CSS, JavaScript, and React
- Works closely with clients and provides timely updates
- Conducts thorough testing and debugging for high quality standards
- Achieved high client satisfaction and 100% bug-free track record
- Utilizes new technologies and tools for increased efficiency
- Continuously learning and staying up-to-date with latest industry trends.

PROJECTS

PennyWise - Flutter app

- Users input expense data via a user interface, validated and stored in Hive using a unique identifier.
- The app uses a chart library to generate a graph of daily expenses for each day of the week, updating dynamically in real-time.
- The app utilizes phone storage for Hive's NoSQL database, which can be backed up to cloud storage for data persistence and recovery.

Point of Sale System

- Built with PHP, the point-of-sale system has a web-based interface accessible from any device.
- Includes barcode scanner, real-time inventory tracking, and receipt generation.
- Manages multiple payment methods, discounts, taxes, and has robust security features.
- Supports integration with other systems and can be customized to meet specific store requirements.
